Start of actual spraying on World Trade Center

In my meeting yesterday with Lou DiBono, he advises that as of now the critical path method on the World Trade Center calls for his starting up of spraying on April 20, 1969.

In addition, Lou advises tht he has had sprayers practicing all day Saturday for the past 2 Saturdays and will continue to do so for several Saturdays in the future. Also, he has purchased helmets, buttons, 400 plus special tarpaulins (acid proof) etc. etc. and in addition, to the 12 Universal Machines all are being checked, double checked and triple checked ready for action when called upon. This contractor never ceases to amaze me as to his preparations, precautions and ability to spend money and be prepared to put forth a truly big time operation.'
